Title: [MIV] Patch margins conformance bitstream

Source: Adrian Dziembowski, Błażej Szydełko (PUT)

1 Abstract

The document presents the new CB26 conformance bitstream generated using TMIV21 including the patch margins syntax. The following files are provided:

- (1) .bit bitstream,
- (2) .txt readme file,
- (3) .dec output log
- (4) .hls human readable parsed metadata
- (5) .csv file with bitrate report

2 CB26: decoder-side depth estimation

List of tested features:

- vme_patch_margin_enabled_flag = true
- asme_patch_margin_enabled_flag = true

Parameters:

- sequence E01
- number of frames = 3
- intra period = 32
- configuration files: config/test/patch_margins
- VVenC v1.12.0
- gcc 11.4
- generated bitstream is TMIV_DS3_E_QP3.bit (177,308 bytes).
- the bitstream is renderable.

3 Output log

4 Recommendation

The authors recommend using the conformance bitstream presented in this document for assessing the conformance of a MIV decoder with respect to the normative requirements specified in ISO/IEC 23090-12.
